Pitch Pocket Pan

DESCRIPTION :

A pitch pocket is used on both sloped and flat roofs to provide a water-tight seal around columns or other roof penetrations. On traditional installations, metal boots or pipe sleeves are used for water-tight protection but often a specialty flashing is required, this is also called a pitch pocket.

Pitch pockets are metal sleeves used to flash irregularly shaped roof penetrations on flat roofs employing membrane or tar and gravel roofing systems. The sleeve/pocket is filled with a mastic liquid sealant to seal around the penetration.

PRODUCT LIST:

Pitch Pocket Pan

ITEM NO:	DESCRIPTION	PRODUCT CODE
1	Pitch Pocket Pan—4"	GPP 400
